1 Summary of Key Parameters monitored in 2021

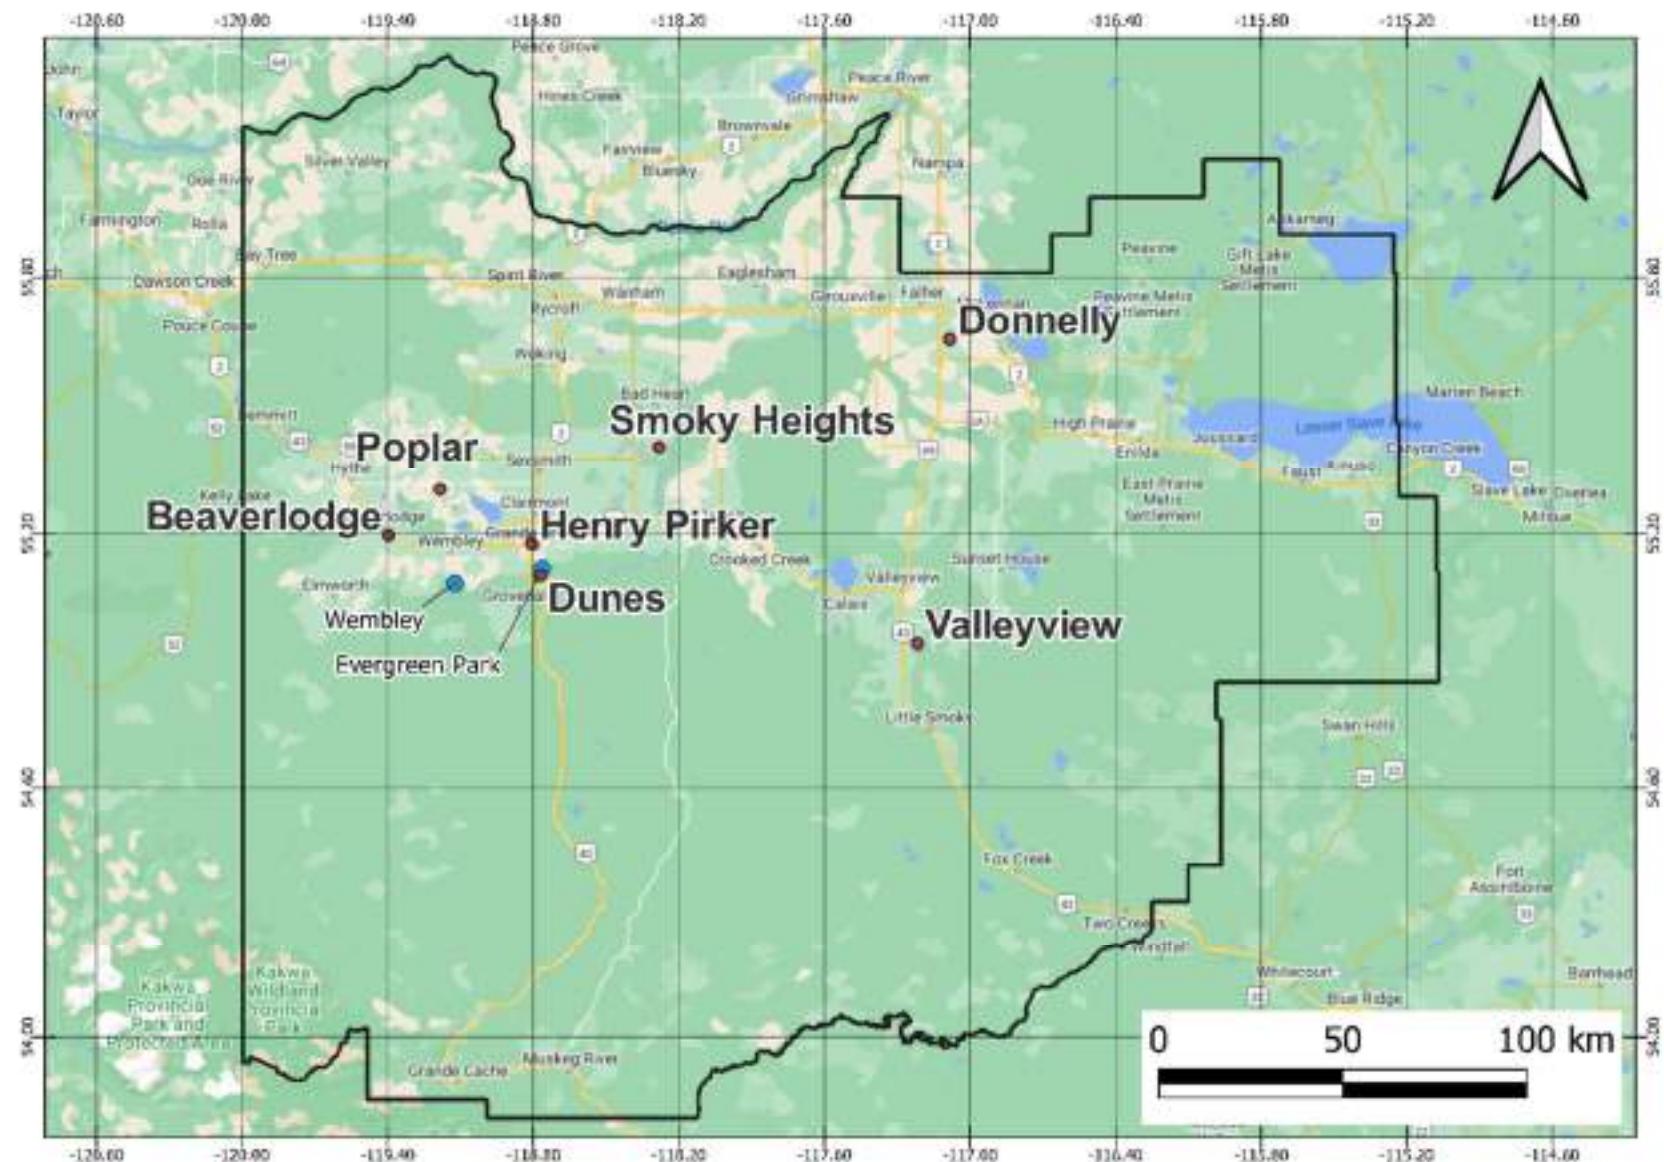

The PAZA air monitoring network in 2021 includes a continuous monitoring network and a passive network. The continuous monitoring network contains seven air monitoring stations (overall nine locations monitored due to station moves). Wembley station operated from January to September 2021 then moved to Poplar, which operated from October to December 2021. Evergreen Park operated from January to October 2021 then moved to Dunes, which operated from November to December 2021. The following figure illustrates the location of the monitoring stations.

The PAZA Passive monitoring network in 2021 included collection of NO₂, SO₂, and H₂S at 45 stations located throughout the region, the following figure also illustrates the locations of the passive monitoring stations.

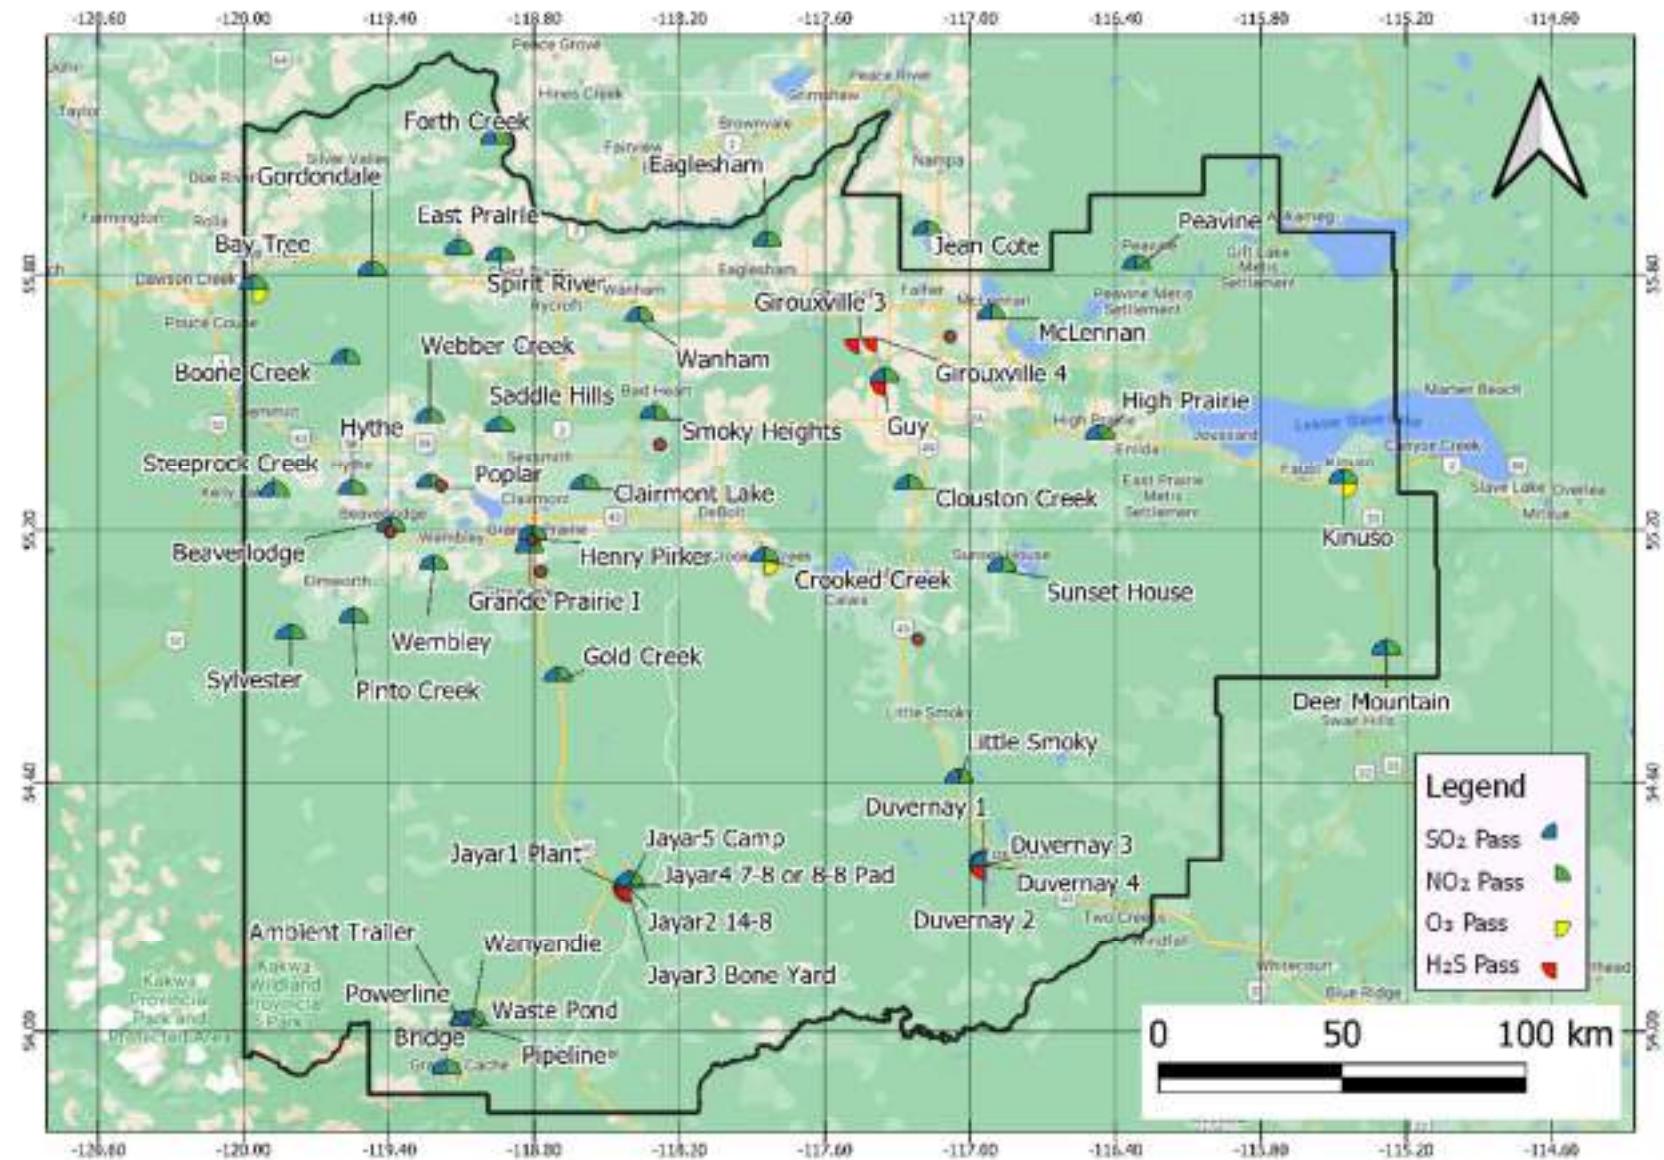

The continuous air monitoring stations in this report measured the following parameters in 2021:
